Отчёт по лабораторной работе 2

Измерение и тестирование пропускной способности сети. Интерактивный эксперимент

Цвелев С.А. НПИбд-01-22

Содержание

1 Цель работы

Основной целью работы является знакомство с инструментом для измерения пропускной способности сети в режиме реального времени — iPerf3, а также получение навыков проведения интерактивного эксперимента по измерению пропускной способности моделируемой сети в среде Mininet.

2 Ход работы

Запускаем машину mininet и хостовую виртуальную. Заходим в mininet с хостовой.

```
mininet@mininet-vm: ~
sacvelev@sacvelev:~$ ssh -Y mininet@192.168.56.102

```
mininet@mininet-vm:~$ sudo apt-get install git jq gnuplot-nox evince

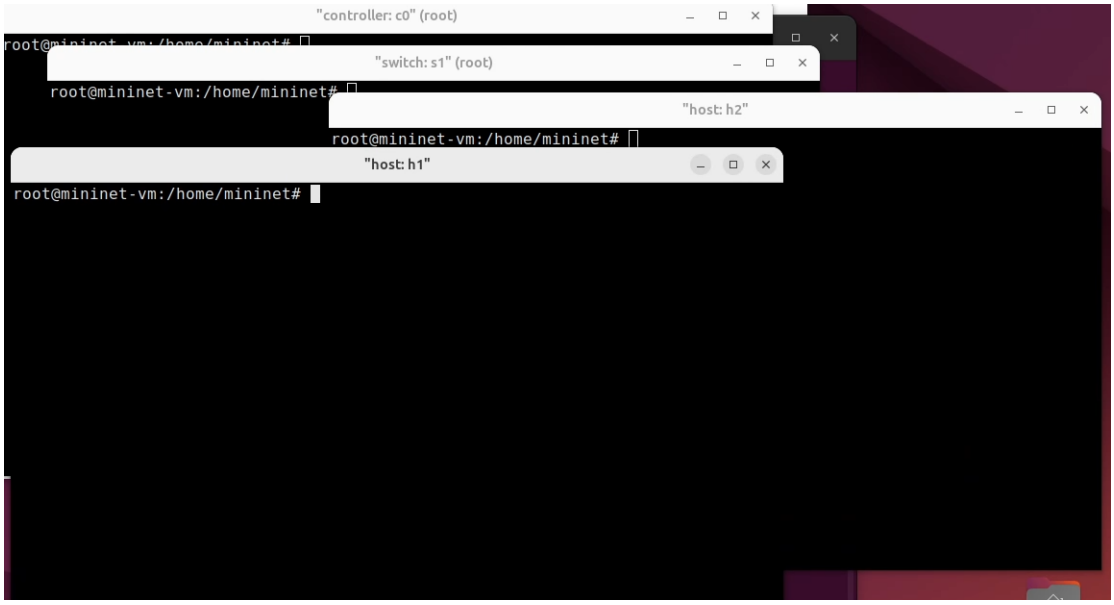
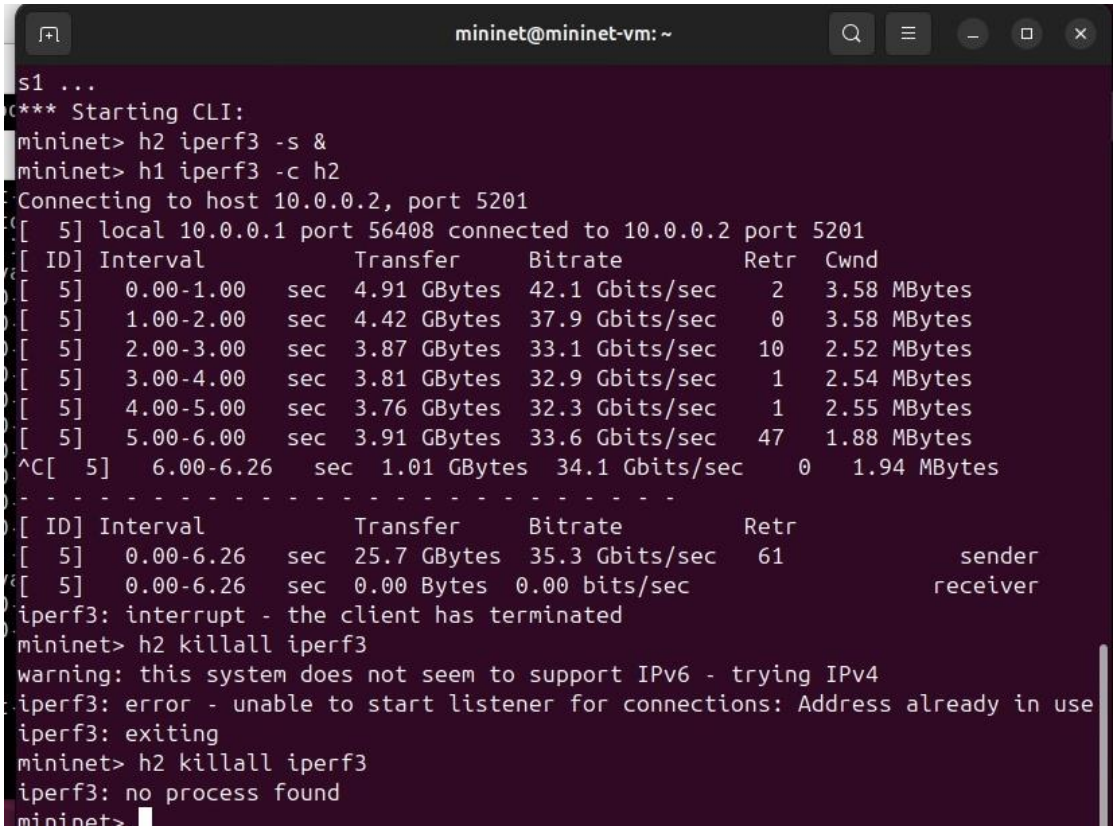
Создаём минимальную топологию. Откроются терминалы каждого устройства.



Отправим пакеты данных с h1 на h2.



Затем, проверяем разные параметры. Например, передаём пакеты пять секунд.
